- * Besides above conditions, sludge to be treated must be able to make flocculation by polymer.
- * Use of potable water is strongly recommended. In case of other cases, please consult with AMCON.
- * This equipment is for indoor use only. If used outside, protect equipment from weather conditions.
- * When installing, make sure the load capacity of the installation place against the weight of equipment.

● Recommended Maintenance Space / Hoisting Equipment Requirement

Secure enough space around the equipment for the maintenance and future overhauling of VOLUTE DUO Cylinder. Hoisting facility is required for overhaul works. A mobile overhead crane is strongly recommended.

Height: At least to hoist VOLUTE DUO Cylinder 500mm.

A: Secure enough space to handle discharged Sludge cake for Conveyor or Container. Recommended to have the same length as VOLUTE DUO Cylinder if possible.

B: Secure clear flat surface without any pipes/bumps on one of the sides at least enough to place one VOLUTE DUO Cylinder. In case Overhaul will be not conducted on site but elsewhere due to available space, then secure clear path to move VOLUTE DUO Cylinder outside the installation area.

*Check General Assembly drawing and Specification sheet of your equipment.

*In case any questions consult with AMCON or its distributor
